All glasses are delivered in a case including an Allen key.

All Champion glasses can be used by left and right hand shooters.

Each position of the glass holder can be fixed with the Allen key which guarantees a perfect setting of the glasses.

The nose bridges are made of silicone containing a metal core.

This is very kind to the skin but guarantees a perfect setting as well.

For each discipline you have got the option of using a different glass diameter.

Champion uses three different diameters: 25 mm, 32 mm and 42 mm. These are available for all our models of glasses.

Different disciplines require an optimum adaptability of the glasses and a perfect setting.

For specific lighting conditions a great variety of filter colours can be used. Champion makes use of anti-reflected mineral filter glasses.

*For production reasons the amethyst filter can only be delivered in plastic (with the lenses being hardened and super anti-reflected)
